

Class AlertSystem

java.lang.Object
AlertSystem

```
public class AlertSystem  
extends Object
```

This class creates an AlertSystem object for different notification mediums to be implemented. It has a NotificationMedium object as an attribute and an ArrayList object that stores sent messages.

Constructor Summary

Constructor Details

AlertSystem

```
public AlertSystem()
```

Method Details

setMedium

```
public void setMedium(NotificationMedium pMedium)
```

This method takes in a NotificationMedium object as a parameter and assigns it to the medium attribute

Parameters:

pMedium - - NotificationMedium gets assigned to medium attribute

notifyUser

```
public void notifyUser(String message)
```

This method takes in a message string. If the medium attribute is null, the user is notified that the medium needs to be set. Otherwise, the message is displayed to the user, and the message is stored in the messageList attribute.

Parameters:

message - - String to be displayed to the user

main

```
public static void main(String [] args)
```

This is the main block used to implement and test the AlertSystem and intertwining classes

Parameters:

args - - Passed from the console, not used
